ENGINEERING SERVICES

EXPERTISE ENGINEERING FOR YOUR SOLAR PHOTOVOLTAIC SYSTEM.

At **Sustineo**, we provide high-tech, expert engineering to help design a quality photovoltaic system. Sustineo employs diverse experts with experience that use the latest technology to efficiently layout and design your system quickly.

PERFORMANCE | SIMPLIFIED

SERVICES OVERVIEW

Whether you need a full design-build approach or just construction services, Sustineo operates a flexible business model that self-performs all aspects of a solar, electrical, or general contracting project. We are licensed to contract throughout California.

Our design-build process can help lower total project costs and deliver superior results no matter what project type.

One entity, one contract, one holistic approach from initial concept to final sign off provides less stress for you and your team.

Design-build is a dynamic alternative for any company wishing to complete projects faster and more accurately.

TOTAL PROJECTS:	DESIGNED AND INTERCONNECTED:	UNDER ASSET MANAGEMENT:	UNDER O&M:
860+	150+ MW	21+ MW	30+ Sites

OUR DIFFERENTIATORS AND EXPERTISE

INDEPENDENT ENGINEERS

- Feasibility, design, interconnection, and permitting.
- Designed and interconnected over 150 MW.
- System and performance modeling
- Predicts accurate power production

DESIGN & MANAGEMENT

Our team's role expands more than just a project's design. We manage multiple phases which include procurement, coordination and installation support.

We are capable of designing and permitting solar projects under accelerated time frames following our S.M.A.R.T. principles.

PROJECT MANAGEMENT

Sustineo will work with your management team, maintenance staff and stake holders to ensure that a complete scope of work is defined and efficiently complete.

We take great pride in communication with all project partners and details of the design process.

INTERCONNECTION

Our in-house staff of engineers will coordinate directly with local AHJ's.

We handle all necessary paperwork for interconnection and track approvals with the local energy provider.

PROJECT DEVELOPMENT

- Feasibility studies
- Review infrastructures and electrical loads
- Energy storage evaluation and analysis
- PV System modeling and generation profile
